1. Product Feature

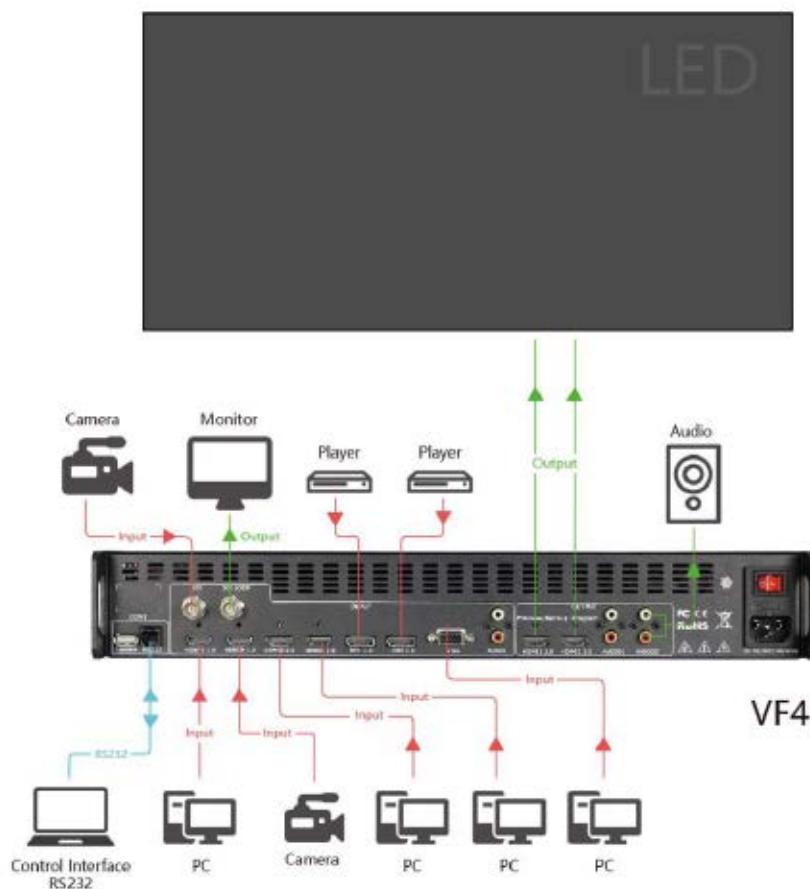

- HDR Color Reduction and Enhancement
- DP 1.2 / HDMI 2.0 4K@60Hz Input
- HDMI 2.0 4K@60Hz Output
- Any 4k Preview Input
- Any 4K PIP Input Channel
- EDID Management, P2P Display
- Cascade Split
- Embedded Audio Decoder, Video and Audio Synchronization
- Support 420 | 422 | 444 Video Format
- Open Control Protocol

2. Product Introduction

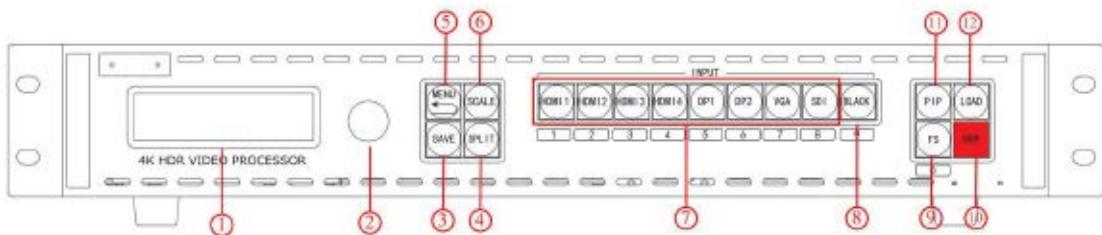

4K HDR application has become more and more popular in LED display. 4K sending card is already commonly used in application. VF4 is the professional 4K HDR solution from SPROLINK.

VF4 support HDMI 2.0 input and output. It is support HDR color reduction and enhancement. Not only can show HDR effects when applied with 4K sending cards, but also can realize HDR on normal 2K screen.

3. Hardware Overview

3.1 Front Panel

OLED Display

1	Displays current status of the device, and provides interactive choices in conjunction with buttons on the front panel.
---	---

Rotary Knob

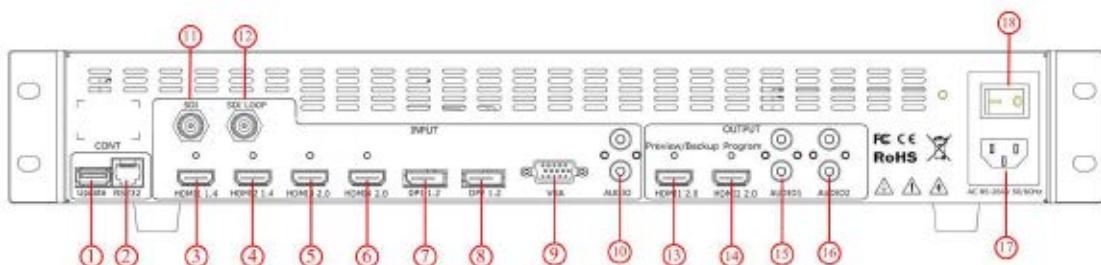

2	This button uses for menu selections and confirmation.
---	--

Button

3	<p>SAVE Button: Save the setting into mode, use LOAD Button to cooperate. Press SAVE button, then M1\ M2\ M3\ M4\ E\ F\ G\ H\ DVI 3\ DVI 4 Button changes into silk-screen 1\2\3\4\5\6\7\8\9\0 SAVE channels. Press any one to save current setting into that channel.</p>

3.2 Back Panel

Control and Update

1	Connection for product firmware update
2	Connection used by RS232 for third party control

Input

1	HDMI 1.4 Support 3840*2160@30HZ and 4K1K\2K1K input; Support customize input
---	--

2	HDMI 1.4 Support 3840*2160@30HZ and 4K1K\2K1K input; Support customize input
3	HDMI 2.0 Support 3840*2160@60HZ, 3840*2160@30HZ and 4K1K\2K1K input
4	HDMI 2.0 Support 3840*2160@60HZ, 3840*2160@30HZ and 4K1K\2K1K input
5	DP 1.2 Support 3840*2160@60HZ, 3840*2160@30HZ and 4K1K\2K1K input
6	DP 1.2 Support 3840*2160@60HZ, 3840*2160@30HZ and 4K1K\2K1K input
7	VGA INPUT: Support 2K VGA Input
8	RCA AUDIO INPUT: External audio input interface
9	SDI INPUT: Optional module, Support 3G SDI\HD SDI\SD SDI
10	SDI LOOP: Optional module, Support 3G SDI\HD SDI\SD SDI

Output

1	HDMI 2.0 Preview (TBD) Support 3840*2160@60HZ, 3840*2160@30HZ and 4K1K\2K1K input
2	HDMI 2.0 Program Support 3840*2160@60HZ, 3840*2160@30HZ and 4K1K\2K1K input
3	RCA Audio Output: External Audio Output
4	RCA Audio Output: External Audio Output

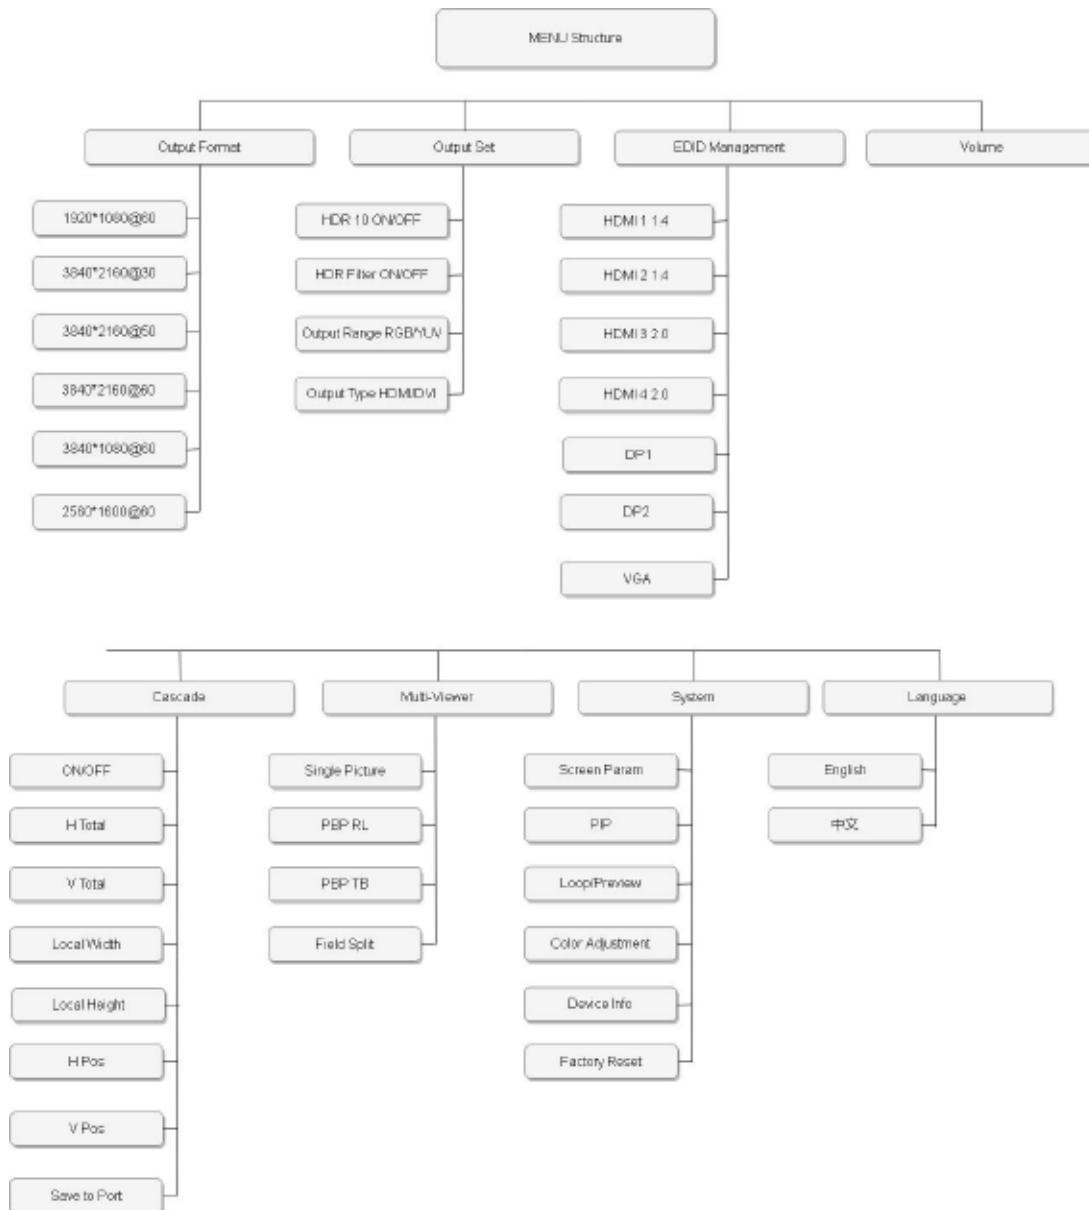

Power

1	IEC- Power interface: AC 85-264V, 50/60HZ, max 45W.
2	Power Switch

4. Operations

- Menu Structure
- Output Format
- Screen Parameter Setting
- PIP Setting
- Cascade Split Setting
- EDID Management
- HDR Setting
- Multi-Viewer Setting
- System

4.1 Menu Structure

4.2 Output Format

The default output format for VF4 is 1920*1080@60h.

Follow the instructions below to change output format.

Set output resolution as 3840*2160@60HZ

Steps:

1. Push Menu select OUTPUT, Push the knob to enter

2. Turn the knob and enable 3840*2160@60HZ

3. Push the knob to confirm. Will take several seconds to configure.

4. When the arrow disappears, press MENU to home page to check

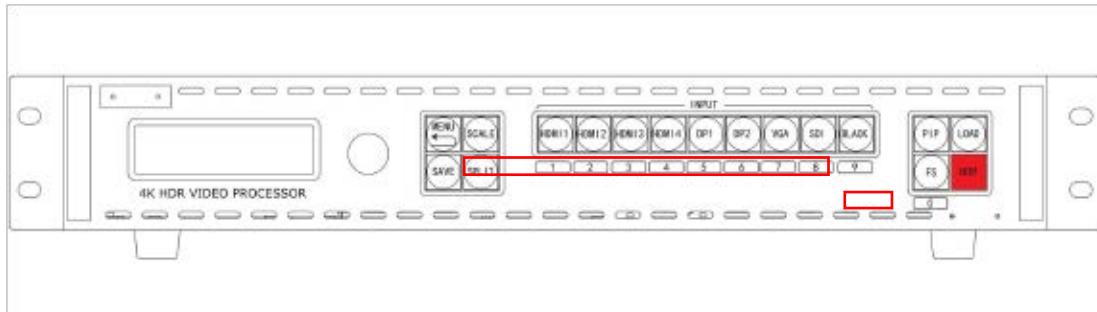

whether it succeeds.

4.3 Screen Parameter Setting

Use scale button to configure screen size according the screen size. Follow the steps below to set screen parameter as 3840*1536.

Push scale button, enable width setting the numeric button will lighted for digital width setting.

Set the width as 3840, push the knob to confirm. Set the height in 1536 in same way.

Param	Param
→ Width	3840
Height	1536
H Position	0

4.4 PIP Setting

VF4 PIP Setting: Set HDMI 3 as background and set HDMI 4 as PIP layer.

Enable PIP: Push PIP button to enable PIP. Customer can also enable PIP in System Menu.

Set Image Layout: PIP CNT

→ PIP	ON
Image Layout	PIP CNT
Image Setting	Image B

Enable Image A or Image B for adjustment

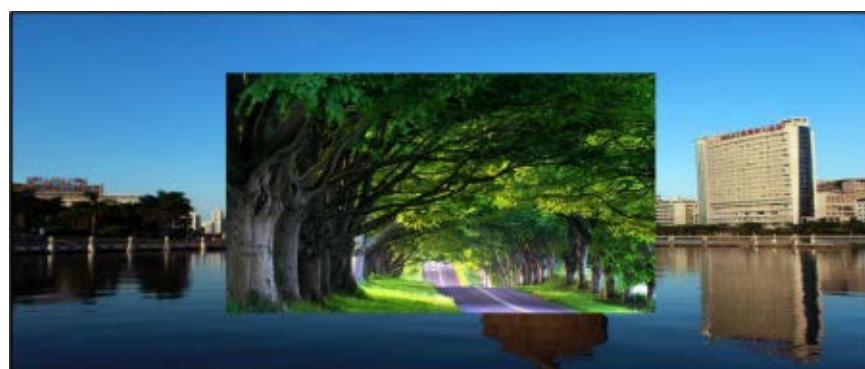

Choose HDMI 3 as image A input source.

Set Image A scale. Value as 3840*1536.

Param	Param
→ Width	3840
Height	1536
H Position	0

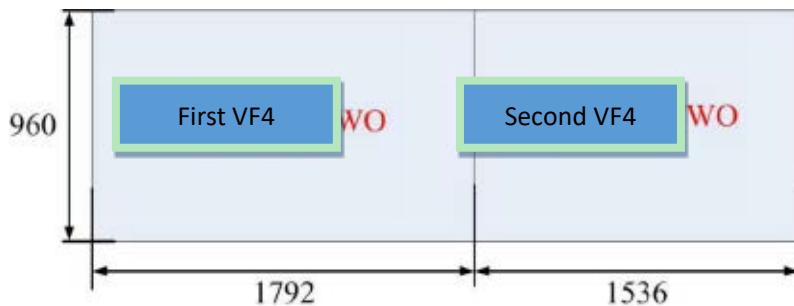

Push SPLIT to enable image B. Push scale for image B size and position setting Use Save and Load function to recall setting

4.5 Cascade Split Setting

For Cascade Split VF4 currently support 1920*1080*60 output only.

Customer have screen in 3328*960 (Left screen resolution: 1792*960; Right Screen resolution: 1536*960). Need2 VF4 and 2 sending card to do mapping.

Steps:

Connection Diagram: Use signal splitter and feed the signal into 2 set of VF4. The first VF4 will handle left screen. Second VF4 will launch right screen.

Set Parameters

Need to enable Cascade Split Function on both VF4.

For first unit.

→ Cascade	ON
H Total	3328
V Total	960
Local Width	0

Set H total and V total as screen size 3328*960.

Cascade	OFF
H Total	3328
→ V Total	960
Local Width	0

Set Local Width 1792 Height 960 as left screen size H POS and V POS is 0

Cascade	OFF
H Total	3328
V Total	960
→ Local Width	1792

Local Height	960
H Pos	0
V Pos	0
→ Save to Port	Click

Save to Port to enable setting

For Second Unit

Set H total V total same with first unit

Cascade	ON
H Total	3328
V Total	960
→ Local Width	1536

Set Local width 1536 height 960 as right-side screen. The right screen should start from 1792(First screen width). Set H Pos as 1792.

→ Local Height	960
H Pos	1792
V Pos	
Save to Port	»

Click Save to Port to enable setting

4.6 EDID Management

Normal Graphic card do not support customer output resolution. By EDID Management VF4 custom input resolution to realize Pixel by Pixel display. Follow

the steps below to custom input resolution as 3072*1536.

Press Menu Button, and enter into EDID Management by knob.

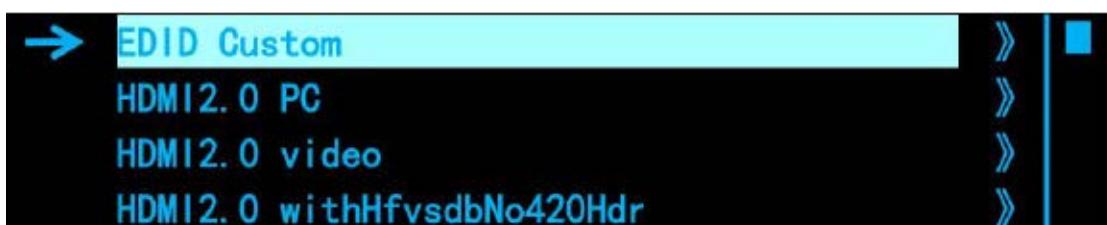

Press EDID input interface by knob (The adjustable interface can be revised).

Now we take HDMI 2.0 for an example to set Input EDID.

Select HDMI 2.0 enable EDID custom

When entering into CUSTOM, press the set format as 3072, 1536 and 60 to finish the EDID setting.

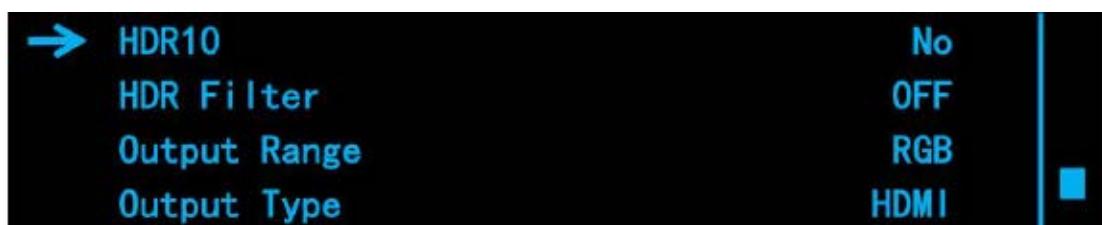

Check back to the home page

(Some computers take effects after reconnection the cables).

4.7 HDR Setting

Connect HDR Signal with HDMI3/4 HDMI 2.0 port.

Push the red button to enable HDR or trigger HDR in device menu after finish resolution and parameter setting.

Turn on HDR10 to realize HDR display. If the color is too flashy set, set HDR10 OFF and enable HDR Filter

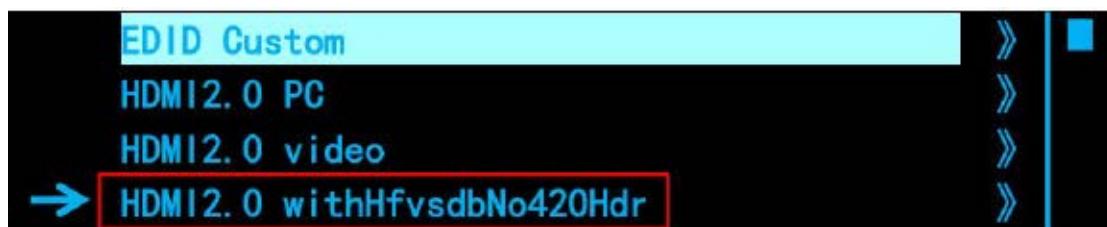

Can also do configuration in color adjustments

To custom HDR configuration need set Color Temperature as Default.

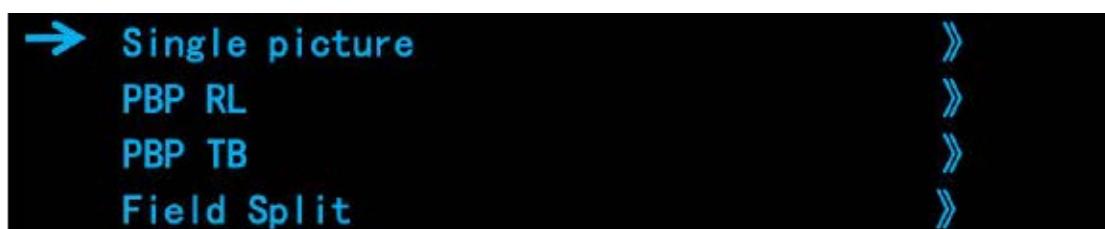

Please use HDMI 2.0 withHfvsdbNo420Hdr as EDID to enable HDR10 to get best display.

4.8 Multi-Viewer Setting

4 support Multi-Viewer function which can split screen into several image.

Customer can configure the signal display layout from menu.

Signal Configure

Use Split to configure signal after enable Field Split.

The * indicate currently enabled image. Use SPLIT button to enable each image

4.9 System

Screen Param: Same with Scale, to adjust screen size

PIP: Same with PIP function. To enable picture in picture

Loop/Preview : TBD

Color Adjustment : Set screen Brightness Color Temperature and GAMMA etc.

To custom HDR configuration need set Color Temperature as Default.

→ Brightness	512
Contrast	2048
Color Effect	Standard
Color Temperature	Default

Factory Reset : Clear all configure to Default

Device Info: Check hardware and software version

SN	0031
→ Software Version	»
Hardware Version	»
OLED Brightness	12

LANGUAGE: This device supports Chinese and English
